Demonstration. Built from synthetic data.

Can an AI agent take over customer email triage and replies?

Yes, with a person reviewing the drafts.

It recognised 92% of the requests your team labelled and answered 26% alone without one unsafe reply. 4 points stay open: complaints, order numbers, the no-AI fallback and reviewer edits.

154
hours a month back to the team

USD 0.009
model fees a message, against USD 2.12 by hand

4
open points, of 15 go-live tests

Decisions needed

	DECISION	WHO	BY WHEN
1	Approve go-live at confidence 0.90, with drafts for review on the other requests	Head of customer service	This week
2	Keep every message with complaint words for a person	Customer service lead	From day one
3	Choose the next process: supplier invoice data entry	COO	Next month
4	Name who reads the weekly agent log	Customer service lead	This week

The evidence is in the report; the agent specification lists what it may do; the automation pack installs it.
